Calcitonin, FNAB, Lymph Node

Calcitonin, FNAB, Lymph Node

1 SDL

<5.0 pg/mL

Calcitonin values <5.0 pg/mL suggest the lymph node does not contain medullary thyroid carcinoma. This result is dependent on accurate sampling and a total needle wash volume of ≤ 1.5 mL. This test should be interpreted in the context of the clinical presentation, imaging and cytology findings. If the results are discordant with the clinical presentation, a sampling error at the time of biopsy should be considered.

The testing method is an electrochemiluminescence assay manufactured by Roche Diagnostics Inc. and performed on the Cobas System.

Values obtained with different assay methods or kits may be different and cannot be used interchangeably.
