WF Hornet IgG

Venom W-F Hornet (D-maculata) IgG

Low

<1.5 mcg/mL

Y165

Reference Value
>3.5

Venom IgG Reference Values: 1.0–3.5 mcg/mL Low venom IgG indicating a significant reaction risk. 3.5–6.0 mcg/mL Moderate level of venom IgG that may be associated from serious sting reactions (J.Clin.Immun.6:172,1983) > 6.0

mcg/mL Elevated venom IgG usually associated with protection from serious sting reactions (J.Clin.Immun.6:172,1983) The interpretative guidelines have been adapted from Golden et al (JACI 1992;90:386–393). The test method used is the Phadia ImmunoCAP IgG assay which has been recalibrated to correlate with the venom IgG assay referenced above. *This test was developed and its performance characteristics determined by Eurofins Viracor. It has not been cleared or approved by the U.S. Food and Drug Administration.
