Order Number X100341021	Client Order Number X100341021	Ordering Physician unknown	Report Notes	
Account Information C7028846 DLMP Rochester		Collected 11 Jan 2021 09:00		

T Cell Receptor Gene Rearrange, V

Final Diagnosis:

1 MCR

PET, paraffin-embedded tissue, T-cell receptor gene rearrangement analysis:

Positive. Clonal T-cell receptor gene rearrangement was detected.

Detection of a clonal T-cell receptor gene rearrangement does not necessarily indicate the presence of a T-cell neoplasm. Apparent clonal T-cell populations are particularly likely to occur in settings where there is physiologic restriction of the T-cell repertoire, such as occurs in autoimmune disorders or with normal aging. Therefore, correlation with pathologic, clinical and other supporting (e.g. immunophenotypic) findings is required for

final interpretation of these results.

Method summary - T-cell receptor gene rearrangement: A PCR-based assay was performed on extracted DNA using primers that bind the gamma and beta chain genes.

Specimen:

PET

MCR
