T Cell Receptor Gene Rearrange, Ts

Final Diagnosis:

1 MCF

Skin: paraffin-embedded tissue, T-cell receptor gene arrangement analysis (Test; test):

Negative. No clonal T-cell receptor gene rearrangement was detected.

Absence of a clonal T-cell receptor gene rearrangement does not necessarily exclude the possibility of a T-cell neoplasm and correlation with pathologic, clinical and other supporting (e.g. immunophenotypic) findings is required for final interpretation of these results.

Method summary - T-cell receptor gene rearrangement: A PCR based assay was performed on extracted DNA using primers that bind the gamma and beta chain genes.
