VDRL, CSF

Positive

Abn

Specimen reflexed to determine VDRL titer value.

MCF

Reference Value
Negative

Received: 07 Dec 2016 07:17

Reported: 07 Dec 2016 08:15

VDRL Titer, CSF

1:4

Abn

SEMI-URGENT RESULT

MCF

Reference Value
Negative

Results are suggestive of neurosyphilis.

Detection of organism-specific antibodies in the CSF may suggest central nervous system infection. However, these results are unable to distinguish between intrathecal antibodies and serum antibodies introduced into the CSF at the time of lumbar puncture or from a breakdown in the blood-brain barrier. The results should be interpreted with other laboratory and clinical data prior to a diagnosis of central nervous system infection.

ADDITIONAL INFORMATION

Positive results by this test are not confirmed with a treponemal-specific assay.
