Sezary Monitoring Flow Cytometry, B

Final Diagnosis

MCR

Peripheral blood, flow cytometric immunophenotyping:

No immunophenotypically aberrant T-cell population detected.

Comment:

Detection of a small population of immunophenotypically aberrant T cells is possible only if the immunophenotype is distinct from the background normal cells. Correlation with clinical and other laboratory findings is recommended.

Reviewed by: SHANDA VOELTZ

Special Studies

MCR

WBC: 10.0 x 10(9)/L

%Lymphs (CBC/automated differential): 10%

#Lymphs (CBC/automated differential): 1.0 x 10(9)/L

Results:

T-cells/NK-cells: Normal phenotype by CD2, CD26, CD3, CD4, CD45, CD5, CD7, CD8 and TRBC1.

Quality Assessment: Specimen received within validated guidelines.

Microscopic Description

1 MCR

A submitted Wright-Giemsa slide and a Wright-Giemsa-stained slide prepared from the flow cytometry specimen are examined.
