Beta-Amyloid Ratio (1-42/1-40), CSF

Beta-Amyloid Ratio

0.050 ratio

Low

SDL
Reference Value
 ≥ 0.073

Beta-Amyloid Ratio Interpretation

SDL

An abnormal beta-Amyloid Ratio (1–42/1–40) of ≤ 0.058 is consistent with a positive (abnormal) amyloid positron emission tomography (PET) scan result. This result does not establish a diagnosis of Alzheimer's disease or other cognitive disorder.

ADDITIONAL INFORMATION

The testing method is a chemiluminescent enzyme immunoassay manufactured by Fujirebio, Inc. and performed on the Lumipulse analyzer. The beta-Amyloid ratio is calculated by using individual measurements of the beta-Amyloid 1–42 and beta-Amyloid 1–40.

The Lumipulse beta-Amyloid ratio (1–42/1–40) results must be interpreted in conjunction with other patient clinical information. This test is not intended as a screening or stand-alone diagnostic assay.

Values obtained with different assay methods or kits may be different and cannot be used interchangeably.
