Order Number SA00114255	Client Order Number SA00114255	Ordering Physician CLIENT, CLIENT	Report Notes	
Account Information C7028846 DLMP Rochester		Collected 11 Nov 2018 12:00		

CDG, S

Interpretation

1 MCR

Normal result. This finding is not consistent with a congenital disorder of glycosylation (CDG), particularly not the deficiencies of phosphomannomutase (PMM; CDG type Ia) and phosphomannoisomerase (PMI; CDG Ib). Please note that some newborn patients with these disorders intermittently normalize their transferrin glycoform pattern and may escape diagnosis. If the patient's clinical presentation is highly suggestive of a CDG, consider sending another sample to repeat the analysis in 6 to 10 weeks.

CDGN, S

Interpretation

1 MCR

NEGATIVE In this sample, N-glycan, transferrin, and apolipoprotein CIII isoform analyses are normal. Please note that normal results may not rule-out all congenital disorders of glycosylation. We need clinical information for further interpretation. If clinically indicated, consider sending another sample in 6 to 10 weeks to repeat the analysis. Please contact the Biochemical Genetics consultant or genetic counselor on call (1-800-533-1710) if you have any questions.
