51 pg/mL

Parathyroid hormone (PTH) values <100 pg/mL suggest that the biopsied site does not contain PTH secreting tissue. This result is dependant on accurate sampling and a total needle wash volume of ≤ 1.5 mL.

This test should be interpreted in the context of the clinical presentation, imaging and cytology findings. If the results are discordant with the clinical presentation, a sampling error at the time of the biopsy should be considered.

The testing method is an electrochemiluminescence assay manufactured by Roche Diagnostics Inc. and performed on the Modular or Cobas system.

Values obtained with different assay methods or kits may be different and cannot be used interchangeably.

Right Parathyroid

Received: 13 Dec 2022 16:39

Reported: 13 Dec 2022 16:40

Laboratory Notes

- 1 This test has been modified from the manufacturer's instructions. Its performance characteristics were determined by Mayo Clinic in a manner consistent with CLIA requirements. This test has not been cleared or approved by the U.S. Food and Drug Administration.
