Amylase, Pancreatic Cyst
1 SDL
100 U/L

A pancreatic cyst fluid amylase concentration of <250 U/L indicates a low risk of a pseudocyst and is more consistent with cystic neoplasms such as mucinous cystic neoplasms (MCN),intraductal papillary mucinous neoplasm (IPMN), serous cystadenomas, cystic neuroendocrine tumor, and mucinous cystadenocarcinoma. This clinical interpretation is only applicable to cyst fluid. For pancreatic sources other than cyst fluid clinical interpretation is not available.

This test result should be interpreted in the context of clinical

presentation, imaging and cytology findings.

The testing method is a substrate kinetic assay manufactured by Roche Diagnostics Inc. and performed on the Modular or Cobas system.

Values obtained with different assay methods or kits may be different and cannot be used interchangeably.

Test results cannot be interpreted as absolute evidence for the presence or absence of malignant disease.
