

Patient ID SA01445618	Patient Name VALIDATION, PT217	Birth Date 1965-10-15	Sex F	Age 60
Order Number SA01445618	Client Order Number SA01445618	Ordering Physician CLIENT, CLIENT	Report Notes	
Account Information C7028846 DLMP Rochester		Collected 03 Nov 2025 08:00		

Phospho-Tau(217), P

pTau217, P

0.123 pg/mL

REFERENCE VALUE

Negative: ≤ 0.185 pg/mL

Intermediate: 0.186–0.324 pg/mL

Positive: ≥ 0.325 pg/mL

pTau217 Interpretation

A normal (negative) pTau217 result is consistent with a negative (normal) amyloid positron emission tomography (PET) scan result. This result indicates a reduced likelihood that an individual has neuropathological changes associated with Alzheimer's disease.

Clinical performance of this test was established in a study of 427 individuals, 50 years and older, with mild cognitive impairment or early dementia. The prevalence of amyloid pathology was 64% as defined by amyloid-PET and a Centiloid of

SDL

≥ 25 . For detection of an abnormal amyloid-PET, the test sensitivity at the lower cutpoint (≤ 0.185 pg/mL) was 92% and the specificity at the upper cutpoint (≥ 0.325 pg/mL) was 96%.

The diagnostic performance of this test has not been established in asymptomatic individuals. Elevations of pTau217 may be seen in individuals with impaired kidney function associated with chronic kidney disease and should be interpreted with caution in these situations.

The testing method is a chemiluminescent enzyme immunoassay manufactured by Fujirebio, Inc. and performed on the Lumipulse analyzer. Values obtained with different assay methods or kits may be different and cannot be used interchangeably.

This test is not intended as a screening or standalone diagnostic assay; correlation with clinical findings is recommended.
