Thyroglobulin, FNAB Needle Wash

Thyroglobulin, FNAB, Lymph Node

SDL

<0.1 ng/mL

Reference Value
≤1.0

Thyroglobulin, FNAB, Interpretation

1 SDL

Thyroglobulin values ≤1.0 ng/mL suggests the node does not contain differentiated follicular cell derived thyroid carcinoma. This result is dependent on accurate sampling and a total needle wash volume of ≤1.5 mL. This test should be interpreted in the context of the clinical presentation, imaging and cytology findings.

The testing method is an immunoenzymatic assay manufactured by Beckman Coulter Inc. and performed on the UniCel Dxl 800.

Values obtained with different assay methods or kits may be different and cannot be used interchangeably.

Test results cannot be interpreted as absolute evidence for the presence or absence of malignant disease.

Thyroglobulin, FNAB, Source

SDL

Lymph node
