Thyroglobulin, Tumor Marker

Thyroglobulin Antibody, S

1.8 IU/mL

High

Thyroglobulin, Tumor Marker, S

10 ng/mL

High

REFERENCE VALUE

Athyrotic <0.1

Intact Thyroid ≤33

Thyroglobulin Interpretation

Quantitation of thyroglobulin may be unreliable due to the presence of anti-thyroglobulin antibodies.

Thyroglobulin (Tg) levels must be interpreted in the context of

MCF

Reference Value
<1.8

MCF

MCF

TSH levels, serial Tg measurements and radioiodine ablation status. Tg levels of ≥ 10 ng/mL in athyrotic individuals on suppressive therapy indicate a significant (>25%) risk of clinically detectable recurrent papillary/follicular thyroid cancer.

ADDITIONAL INFORMATION

PLEASE NOTE: Thyroglobulin flagging is based on athyrotic reference values.

The thyroglobulin and thyroglobulin antibody testing methods are immunoenzymatic assays manufactured by Beckman Coulter Inc. and performed on the Unicel DXI 800.

Values obtained from different assay methods or kits may be different and cannot be used interchangeably.

The results cannot be interpreted as absolute evidence for the presence or absence of malignant disease.
