Interpretation (GALT)

The galactose-1-phosphate uridyltransferase (GALT) activity in this sample is reduced, however, not consistent with classic galactosemia (GALT deficiency). This result can be explained by a variety of genotypes including carrier status (NG). If molecular genetic testing is desired, this could be done on the existing sample by calling MML within one month. Please contact the Biochemical Genetics consultant or genetic counselor on call (1-800-533-1710) if you have any questions.

ADDITIONAL INFORMATION

Enzyme reaction followed by LC-MS/MS
