Protein S Activity, P

Result Name	Value	Unit	Reference Value	Performing Site
Protein S Activity, P	95	%	65–150	MCR
Anticoagulants (for example oral direct thrombin inhibitors like dabigatran, anti-Xa inhibitors like rivaroxaban, apixaban or edoxaban), heparin levels greater than 1 U/mL, inhibitors of the APTT test system (for example lupus anticoagulant), inhibitors of bovine factor V (for example antibodies that may arise in patients treated with certain bovine topical thrombin preparations) may produce a falsely normal or elevated protein S activity result. Suggest clinical correlation and if indicated consider repeat assay of protein S activity and/or antigen in the absence of anticoagulation therapy.
