

Test Definition: HVA

Homovanillic Acid, 24 Hour, Urine

Reporting Title: Homovanillic Acid (HVA), 24 Hr, U

Performing Location: Rochester

Necessary Information:

1. Collection duration and urine volume in milliliters are required.

- 2. Patient's age is required.
- 3. All patients receiving L-dopa should be identified to the laboratory when this test is ordered.
- 4. Bactrim may interfere with detection of the analyte. All patients taking Bactrim should be identified to the laboratory when this test is ordered.

Specimen Requirements:

Patient Preparation: Administration of L-dopa may falsely increase homovanillic acid results; it should be discontinued 24 hours prior to and during specimen collection.

Supplies: Urine Tubes, 10 mL (T068)

Container/Tube: Plastic, 10-mL urine tube
Specimen Volume: 5 ml

Specimen Volume: 5 mL **Collection Instructions:**

- 1. Collect a 24-hour urine specimen.
- 2. Add 25 mL of 50% acetic acid as preservative at start of collection. If specimen is refrigerated during collection, preservative may be added up to 12 hours after collection. Use 15 mL of 50% acetic acid for children less than 5 years old. This preservative is intended to achieve a pH of between approximately 1 and 5. If necessary, adjust urine pH to a level between 1 and 5 by adding 50% acetic acid or hydrochloric acid dropwise and checking the pH.

Additional Information:

- 1. The sensitivity of this test is greater on a 24-hour specimen than on a random specimen.
- 2. See <u>Urine Preservatives-Collection and Transportation for 24-Hour Urine Specimens</u> for multiple collections.

Forms:

If not ordering electronically, complete, print, and send an Oncology Test Request (T729) with the specimen.

Urine Preservative Collection Options:

Note: For preservative or application of temperature controls timing, see Specimen Required.
