

# **Test Definition: ADICI**

Disseminated Intravascular Coagulation/Intravascular Coagulation and Fibrinolysis (DIC/ICF) Profile Interpretation

## **Overview**

#### **Useful For**

Interpretation of testing performed as part of a profile to evaluate laboratory evidence of disseminated intravascular coagulation

#### **Method Name**

Only orderable as part of a profile. For more information see ADIC / Disseminated Intravascular Coagulation/Intravascular Coagulation and Fibrinolysis (DIC/ICF) Profile, Plasma.

Medical Interpretation

#### **NY State Available**

Yes

# **Specimen**

# **Specimen Type**

Plasma Na Cit

## Reject Due To

Gross	Reject
hemolysis	
Gross lipemia	Reject
Gross icterus	Reject

# **Specimen Stability Information**

Specimen Type	Temperature	Time	Special Container
Plasma Na Cit	Frozen	14 days	

# **Clinical & Interpretive**

## **Clinical Information**

Disseminated intravascular coagulation (DIC)/intravascular coagulation and fibrinolysis (ICF), collectively termed DIC/ICF is a consumptive hemorrhagic and microthrombotic disorder that manifests as clinical bleeding or thrombosis.

# **Test Definition: ADICI**

Disseminated Intravascular Coagulation/Intravascular Coagulation and Fibrinolysis (DIC/ICF) Profile Interpretation

Conditions associated with DIC/ICF can include; sepsis, trauma (head injury, severe tissue injury), obstetric complications (amniotic fluid embolism, abruptio placentae), malignancies, vascular disorders (hemangiomas, aortic aneurysm), and immunologic disorders.

These disorders can cause formation of thrombin and fibrin intravascularly, which can result in widespread fibrin deposition contributing to thrombosis and organ failure or, conversely, can result in bleeding due to consumption of coagulation proteins and platelets. DIC/ICF is not a disease; rather it is a syndrome that is secondary to an underlying disorder.

### **Reference Values**

Only orderable as part of a profile. For more information see ADIC / Disseminated Intravascular Coagulation/Intravascular Coagulation and Fibrinolysis (DIC/ICF) Profile, Plasma.

An interpretive report will be provided.

#### Interpretation

An interpretive report will be provided when testing is completed, noting presence or absence of disseminated intravascular coagulation/intravascular coagulation and fibrinolysis.

## **Cautions**

No significant cautionary statements.

## **Clinical Reference**

Boender J: A Diagnostic Approach to Mild Bleeding Disorders Journal of Thrombosis and Haemostasis 2016;14:1507-1516

#### **Performance**

#### **Method Description**

A coagulation expert (clinician or hematopathologist) reviews the laboratory data and an interpretive report is issued.

# **PDF Report**

No

#### Day(s) Performed

Monday through Friday

### **Report Available**

1 to 3 days

# **Performing Laboratory Location**

Rochester

# **Test Definition: ADICI**

Disseminated Intravascular Coagulation/Intravascular Coagulation and Fibrinolysis (DIC/ICF) Profile Interpretation

## **Fees & Codes**

#### **Fees**

- Authorized users can sign in to <u>Test Prices</u> for detailed fee information.
- Clients without access to Test Prices can contact <u>Customer Service</u> 24 hours a day, seven days a week.
- Prospective clients should contact their account representative. For assistance, contact <u>Customer Service</u>.

# **Test Classification**

Not Applicable

#### **CPT Code Information**

85390-26 Special Coagulation Interpretation
