Test Definition: HGOU

Mercury Occupational Exposure, Random, Urine (Non-Orderable)

Overview

Useful For

Only orderable as part of a profile. For more information see:
HGUOE/ Mercury Occupational Exposure, Random, Urine
HMUOE / Heavy Metal Occupational Exposure, with Reflex, Random, Urine

Detecting mercury toxicity due to occupational exposure in random urine specimens

Method Name

Only orderable as part of a profile. For more information see:
HGUOE/ Mercury Occupational Exposure, Random, Urine
HMUOE / Heavy Metal Occupational Exposure, with Reflex, Random, Urine

Triple-Quadrupole Inductively Coupled Plasma Mass Spectrometry (ICP-MS/MS)

NY State Available

Yes

Specimen

Specimen Type

Urine

Specimen Required

Only orderable as part of a profile. For more information see:
HGUOE/ Mercury Occupational Exposure, Random, Urine
HMUOE / Heavy Metal Occupational Exposure, with Reflex, Random, Urine

Specimen Minimum Volume

1.5 mL

Specimen Stability Information

Specimen Type	Temperature	Time	Special Container
Urine	Refrigerated (preferred)	7 days	
	Frozen	7 days	

Clinical & Interpretive

Clinical Information

The correlation between the levels of mercury (Hg) excretion in the urine and the clinical symptoms is considered poor. However, urinary Hg is the most reliable way to assess exposure to inorganic Hg.

For more information, see HG / Mercury, Blood.

Reference Values

Only orderable as part of a profile. For more information see:
HGUOE/ Mercury Occupational Exposure, Random, Urine
HMUOE / Heavy Metal Occupational Exposure, with Reflex, Random, Urine

Biological Exposure Index (BEI): <35 mcg/g creatinine prior to shift

Interpretation

The correlation between the levels of mercury (Hg) excretion in the urine and the clinical symptoms is considered poor. However, urinary Hg is the most reliable way to assess exposure to inorganic Hg.

For more information, see HG / Mercury, Blood.

Cautions

To avoid contamination by dust, specimen should be collected away from the site of suspected exposure.

Performance

Method Description

The metal of interest is analyzed by triple-quadrupole inductively coupled plasma mass spectrometry.(Unpublished Mayo method)

PDF Report

No

MAYO CLINIC LABORATORIES

Test Definition: HGOU

Mercury Occupational Exposure, Random, Urine (Non-Orderable)

Day(s) Performed
Monday through Friday

Report Available
2 to 4 days

Specimen Retention Time
14 days

Performing Laboratory Location
Mayo Clinic Laboratories - Rochester Superior Drive

Fees & Codes

Fees
- Authorized users can sign in to Test Prices for detailed fee information.
- Clients without access to Test Prices can contact Customer Service 24 hours a day, seven days a week.
- Prospective clients should contact their account representative. For assistance, contact Customer Service.

Test Classification
This test was developed and its performance characteristics determined by Mayo Clinic in a manner consistent with CLIA requirements. It has not been cleared or approved by the US Food and Drug Administration.

CPT Code Information
83825
