

Oxycodone with Metabolite Confirmation, Chain of Custody, Random, Urine

### Overview

#### **Useful For**

Detection and quantification of oxycodone, oxymorphone, noroxycodone, and noroxymorphone in urine

Chain of custody is required whenever the results of testing could be used in a court of law. Its purpose is to protect the rights of the individual contributing the specimen by demonstrating that it was under the control of personnel involved with testing the specimen at all times; this control implies that the opportunity for specimen tampering would be limited.

#### **Additional Tests**

| Test Id | Reporting Name             | Available Separately | Always Performed |
|---------|----------------------------|----------------------|------------------|
| COCH    | Chain of Custody           | No                   | Yes              |
|         | Processing                 |                      |                  |
| ADLTX   | Adulterants Survey, CoC, U | Yes                  | Yes              |

# **Testing Algorithm**

Adulterants testing will be performed on all chain of custody urine samples as per regulatory requirements.

#### **Method Name**

Immunoassay/Liquid Chromatography-Tandem Mass Spectrometry (LC-MS/MS)

### **NY State Available**

Yes

## Specimen

## **Specimen Type**

Urine

## Specimen Required

Supplies: Chain-of-Custody Kit (T282)

**Container/Tube:** Chain-of-custody kit containing the specimen containers, seals, and documentation required.

Specimen Volume: 5 mL

**Collection Instructions:** Collect urine specimen in the container provided, seal, and submit with the associated

documentation to satisfy the legal requirements for chain-of-custody testing.

#### **Forms**

1. Chain of Custody Request is included in the Chain-of-Custody Kit (T282).

Oxycodone with Metabolite Confirmation, Chain of Custody, Random, Urine

2. If not ordering electronically, complete, print, and send a <u>Therapeutics Test Request</u> (T831) with the specimen.

# Specimen Minimum Volume

2 mL

## **Reject Due To**

| Gross         | ОК |
|---------------|----|
| hemolysis     |    |
| Gross icterus | ОК |

# **Specimen Stability Information**

| Specimen Type | Temperature              | Time    | Special Container |
|---------------|--------------------------|---------|-------------------|
| Urine         | Refrigerated (preferred) | 28 days |                   |
|               | Frozen                   | 28 days |                   |
|               | Ambient                  | 14 days |                   |

# **Clinical & Interpretive**

### **Clinical Information**

Oxycodone is metabolized to noroxycodone, oxymorphone, and their glucuronides and is excreted primarily via the kidney. The presence of oxycodone greater than 100 ng/mL indicates exposure to oxycodone within 2 to 3 days prior to specimen collection.

Oxymorphone is metabolized in the liver to noroxymorphone and excreted via the kidney primarily as the glucuronide conjugates. Oxymorphone is also a metabolite of oxycodone and, therefore, the presence of oxymorphone could also indicate exposure to oxycodone.

The detection interval for opiates is generally 2 to 3 days after last ingestion.

Chain of custody is a record of the disposition of a specimen to document each individual who collected, handled, and performed the analysis. When a specimen is submitted in this manner, analysis will be performed in such a way that it will withstand regular court scrutiny.

# Reference Values

Negative

**Cutoff concentrations:** 

Oxycodone Immunoassay screen: 100 ng/mL

By liquid chromatography-tandem mass spectroscopy:

Oxycodone: 25 ng/mL Noroxycodone: 25 ng/mL Oxymorphone: 25 ng/mL

Oxycodone with Metabolite Confirmation, Chain of Custody, Random, Urine

Noroxymorphone: 25 ng/mL

## Interpretation

This procedure reports the total urine concentration; this is the sum of the unconjugated and conjugated forms of the parent drug.

### **Cautions**

Other drugs in the opioid class, such as fentanyl, meperidine, methadone, and opiate antagonists such as naloxone, are not detected.

#### **Performance**

# **Method Description**

Oxycodone and its metabolite, oxymorphone, are analyzed via immunoassay. The assay uses specific antibodies that can detect oxycodone and oxymorphone without any significant cross-reactivity to other opiate compounds. The assay is based on the competition between a drug labeled with glucose-6-phosphate dehydrogenase (G6PD), and free drug from the urine sample for a fixed amount of specific antibody binding sites. In the absence of free drug from the sample, the specific antibody binds the drug labeled with G6PD and causes a decrease in enzyme activity. This phenomenon creates a direct relationship between the drug concentration in urine and enzyme activity. The enzyme activity is determined spectrophotometrically at 340 nm by measuring the conversion of nicotinamide adenine dinucleotide (NAD+) to NADH.(Package insert: Oxycodone. Roche Diagnostics; 12/2016)

Confirmation with quantification by liquid chromatography-tandem mass spectrometry (LC-MS/MS). (Unpublished Mayo method)

#### PDF Report

No

# Day(s) Performed

Monday through Friday

## Report Available

2 to 5 days

Oxycodone with Metabolite Confirmation, Chain of Custody, Random, Urine

# **Specimen Retention Time**

14 days

# **Performing Laboratory Location**

Rochester

#### **Fees & Codes**

#### **Fees**

- Authorized users can sign in to <u>Test Prices</u> for detailed fee information.
- Clients without access to Test Prices can contact <u>Customer Service</u> 24 hours a day, seven days a week.
- Prospective clients should contact their account representative. For assistance, contact <u>Customer Service</u>.

#### **Test Classification**

This test was developed and its performance characteristics determined by Mayo Clinic in a manner consistent with CLIA requirements. It has not been cleared or approved by the US Food and Drug Administration.

## **CPT Code Information**

80365

G0480 (if appropriate)
