MAYO CLINIC LABORATORIES

Test Definition: HYDMS

Hydromorphone, Serum

Overview

Useful For
Monitoring therapeutic efficacy/compliance in serum specimens of patients who are prescribed hydromorphone

Special Instructions
- Clinical Toxicology CPT Code Client Guidance

Method Name
Liquid Chromatography Tandem Mass Spectrometry (LC-MS/MS)

NY State Available
Yes

Specimen

Specimen Type
Serum Red

Ordering Guidance
This test should only be ordered by healthcare professionals to monitor patients who have been prescribed hydromorphone.

Specimen Required
Supplies: Sarstedt Aliquot Tube, 5 mL (T914)
Collection Container/Tube: Red top (Serum gel/SST are **not acceptable**)
Submission Container/Tube: Plastic vial
Specimen Volume: 1 mL serum
Collection Instructions: Centrifuge and aliquot serum into a plastic vial.

Specimen Minimum Volume
Serum: 0.5 mL

Reject Due To

Gross hemolysis	Reject
Gross lipemia	OK
Gross icterus	OK

Specimen Stability Information

Specimen Type	Temperature	Time	Special Container
Serum Red	Refrigerated (preferred)	14 days	
	Ambient	24 hours	
	Frozen	28 days	

Clinical & Interpretive

Clinical Information

Opiates are the natural or synthetic drugs that have a morphine-like pharmacological action. They are used primarily for relief of pain and often produce physical and psychological dependence. This test is for use by healthcare professionals to determine if patients prescribed hydromorphone are receiving the right dose for therapeutic efficacy and/or are compliant.

Reference Values

Therapeutic range: 1.0-30 ng/mL
Cutoff concentration: 1.0 ng/mL

Interpretation

Clinically, the presence of hydromorphone in serum can be used to verify adherence or compliance to prescribed opioids, and discourage drug misuse, abuse, and diversion.

When used as sole therapy, the adult therapeutic range suggested by the literature is 1.0-30 ng/mL but must be interpreted alongside other clinical features/test results, symptoms, collection time since last dosage was taken, and signs of abuse/misuse.

Cautions

Any aberrant result should be discussed with the patient and could be confirmed by re-testing or using an alternative matrix (eg, urine).

Performance

Method Description

The opiates are extracted from serum using a solvent to precipitate proteins. The supernatant is removed and analyzed by liquid chromatography tandem mass spectrometry.(Unpublished Mayo method)

PDF Report
No

Day(s) Performed
Tuesday

Report Available
2 to 9 days

Specimen Retention Time
14 days

Performing Laboratory Location
Mayo Clinic Laboratories - Rochester Superior Drive

Fees & Codes

Fees
- Authorized users can sign in to Test Prices for detailed fee information.
- Clients without access to Test Prices can contact Customer Service 24 hours a day, seven days a week.
- Prospective clients should contact their account representative. For assistance, contact Customer Service.

Test Classification
This test was developed and its performance characteristics determined by Mayo Clinic in a manner consistent with CLIA requirements. It has not been cleared or approved by the US Food and Drug Administration.

CPT Code Information
G0480
80361 (if appropriate for select payers)
