

Test Definition: TMSI

Microsatellite Instability, Tumor

Reporting Title: Tumor, Microsatellite Instability

Performing Location: Rochester

Necessary Information:

Pathology report (final or preliminary) must accompany specimen in order for testing to be performed. At minimum, it should contain the following information:

- 1. Patient name
- Block number-must be on all blocks, slides and paperwork (can be handwritten on the paperwork)
- 3. Tissue collection date
- 4. Source of the tissue

Specimen Requirements:

This assay requires at least 40% tumor nuclei for endometrial specimens and at least 20% tumor nuclei for colorectal specimens.

- -Preferred amount of tumor area with sufficient percent tumor nuclei: tissue 72 mm(2)
- -Minimum amount of tumor area: 18 mm(2)
- -These amounts are cumulative over up to 10 unstained slides and must have adequate percent tumor nuclei.
- -Tissue fixation: formalin-fixed paraffin-embedded (FFPE), non-decalcified

Preferred:

Specimen Type: Tissue block

Collection Instructions: Submit a formalin-fixed, paraffin-embedded tissue block with acceptable amount of tumor tissue.

Acceptable:

Specimen Type: Tissue slide Slides: 1 stained and 5 unstained

Collection Instructions: Submit 1 slide stained with hematoxylin and eosin and 5 unstained, nonbaked slides with

5-micron thick sections of the tumor tissue.

Note: The total amount of required tumor nuclei can be obtained by scraping up to 5 slides from the same block.

Specimen Minimum Volume:

See Specimen Required

Forms:

- 1. Molecular Genetics: Inherited Cancer Syndromes Patient Information (T519)
- 2. If not ordering electronically, complete, print, and send 1 of the following forms with the specimen:
- -Gastroenterology and Hepatology Test Request (T728)
- -Oncology Test Request (T729)
