

Reporting Title: AML, 11 Gene, NGS, V

Performing Location: Rochester

Ordering Guidance:

This gene panel is a subset of the NGSSM / Myeloid Neoplasms, Comprehensive OncoHeme Next-Generation Sequencing test and focuses more specifically on the gene mutations that are most prevalent and clinically significant in acute myeloid leukemias (AML). If a wider gene mutation analysis is desired or the indication for testing is for a myeloid malignancy other than AML, consider NGSSM.
